Art Unit: 1711

1. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Since claim 5 and the preamble of claim 6 are limited to a polarized lens, it isn't understood why "polarized lens" is repeated again in the body of the claim 6.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Carr.

See Paper No. 8, paragraph 2.

4. Applicant's arguments filed 6-27-03 have been fully considered but they are not persuasive. The applicants argue that Carr doesn't show 4,4"-methylene-bis(cyclohexyl isocyanate) (H12MDI). The methylene-bis-(4-cyclohexylisocyanate) used by Carr is the same compound. One could confirm this by looking up the lists of various names used for CAS. Reg. No. 5124-30-1.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Slagel in view of Smith.

Art Unit: 1711

7. Slagel (505) discloses the same method of the claims. In example 1, he makes a prepolymer from H12MDI and a diol of molecular weight 1000 at an NCO/OH ratio of 3/1. He chain extends with an aromatic diamine, and he cures at 230 deg. F. He teaches using this polyurethane for lens applications (see abstract). He differs from the claims by not showing a polarized lens.

8. Smith teaches that polarized lenses can be made by bonding a polarized sheet to the surface of a plastic lens (see abstract).

9. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make Slagel's lens polarized per the method of Smith in order to have more potential applications and markets for his polyurethane.

10. Claim 5 is objected to for depending on a rejected claim.
